

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1-14. (Canceled)

15. (Previously Presented) A method for controlling a barricade of a parking space for a vehicle, the method comprising the steps of:

controlling the barricade from the vehicle by a code transmitted using a radio signal, and

checking the code with regard to an authorization of the code, wherein the code is changed by an input, and a plurality of codes are recognized as authorized for one barricade.

B 1
16. (Previously Presented) The method according to claim 15, wherein:

the code is changeable using a password.

17. (Previously Presented) The method according to claim 15, wherein:

the radio signal is transmitted in accordance with Bluetooth.

18. (Previously Presented) The method according to claim 15, further comprising the step of:

logging a dwell time of the vehicle in the parking space.

19. (Previously Presented) The method according to claim 15, wherein:

the code includes one of a personal identification number, an identification number of the vehicle, and an identification number of a radio module.

20. (Previously Presented) A device for controlling a barricade of a parking space for a vehicle, comprising:

a radio module;

a processor;

a memory storing a plurality of authorized codes; and

an actuating technology for controlling the barricade, wherein:

the device is controllable using an authorized code that is receivable from the radio module, and
each of the plurality of authorized codes is changeable using the processor.

21. (Previously Presented) The device according to claim 20, wherein:
the plurality of authorized codes in the memory are changeable using a password.

22. (Previously Presented) The device according to claim 20, wherein:
the radio module includes a Bluetooth module.

B | 23. (Previously Presented) The device according to claim 20, wherein:
the barricade includes one of a garage door and a barrier.

24. (Previously Presented) The device according to claim 20, wherein:
the device is connectable to a computing arrangement, wherein the plurality of authorized codes in the memory are changeable using the computing arrangement.

25. (Previously Presented) The device according to claim 24, wherein:
the computing arrangement logs a dwell time of the vehicle in the parking space.

26. (Previously Presented) A vehicle comprising:
a device that includes:
a radio module,
a processor connected to the radio module,
a signal processing element connected to the processor,
a display connected to the signal processing element, and
an input device connected to the signal processing element for receiving a code, wherein:

the code is transmittable to a device for controlling a barricade of a parking space for a vehicle.

27. (Previously Presented) The vehicle according to claim 26, wherein the radio module includes a Bluetooth module.

28. (Previously Presented) The vehicle according to claim 26, wherein:
the device is formed as a remote control.

29. (New) The method according to claim 15, wherein the code is only changeable using a password.

30. (New) The device of claim 20, wherein the code is only changeable using a password.

31. (New) The vehicle of claim 26, wherein the code is only changeable using a password.
